

ABOUT ME

I am passionate about software development, always striving to create clean, efficient, and user-friendly solutions. Throughout my experience, I have not only advanced my technical knowledge but also strengthened my teamwork and independent project leadership skills. For me, programming is not just a job but a continuous journey of learning and challenges, where innovation and creativity go hand in hand.

PROFESSIONAL EXPERIENCE

BOSCH
Hatvan
sept. 2020 - jan. 2022

Full-Stack Developer

I worked in the I4.0 department, where I developed systems for the internal network using PHP, Laravel, TypeScript, and Angular technologies. The main goal of the projects was to optimize manufacturing processes and increase transparency. We worked in a scrum-based work environment, in agile teams of 4–5 people, progressing in regular sprints. The team was led by a mid-level colleague, but in our work great emphasis was placed on independence and continuous communication to ensure effective teamwork.

FREELANCER
feb. 2022 - aug. 2022

Software Developer

As a freelancer, I participated in both smaller and larger projects, where I carried out frontend and backend development as well as system design tasks. Key technologies: .NET C#, data visualization, and analytics. In my work, I placed great emphasis on creating flexible, customized solutions.

SAMSUNG
Jászfényszaru
aug. 2022 - july. 2023

Full-Stack Developer

At Samsung, I worked as a full-stack developer, where my main responsibility was developing systems for the internal network, primarily using React and Node.js technologies. I also participated in the transformation of an existing native PHP-based system, which we migrated to a modern React foundation. My most significant project was improving the efficiency of the license plate camera system, during which:

- With my self-developed system, we managed to increase the accuracy of truck license plate verification by 20%.
- I developed an analytical chart page that provided real-time data on gate loads. This enabled more efficient redirection of traffic between gates, significantly speeding up truck movements on-site.

Throughout the projects, I played an important role in data visualization, efficiency improvement, as well as agile teamwork, which ensured continuous development and quick responses to new requirements.

FREELANCER
aug. 2023 - jan. 2025

Full-Stack Developer

As a freelancer, I mainly used React, JavaScript, TypeScript, and Next.js technologies to design and develop complete websites. During the projects, I handled both frontend and backend implementation myself, from design to developing functional systems. In addition, I gained experience in creating 3D animations, which provided a richer visual user experience.

ADOTT SOLUTION
jan. 2025 - aug. 2025

Full-Stack Developer

I built an internal project-tracking system for engineers and managers to see, in one place, where each project stands (Inquiry → Spec → SoW → Quote/Order), who did what, and what needs approval. Users design full project structures (modules → tasks → phases with hours), engineers comment and approve at task/module level, while managers get clear status and basic stats. Customers can log in as guests to review their own projects and either approve or reject specs with a reason. The app targets an internal network but remains secure for external access with role-based permissions, auditing, and token-based auth.

STUDIES

TERPLÁN ZÉNÓ SZAKKÉPZŐ ISKOLA ÉS GIMNÁZIUM
Jászberény
2018

High School Diploma

During my secondary school studies, I successfully obtained my high school diploma along with a system administrator qualification. Over these years, I gained solid knowledge in the following areas:

- Programming fundamentals – learning algorithms and using simpler languages.
- Building and configuring networks and servers, including maintenance.
- Hardware and software knowledge, including installing computers, troubleshooting, and operating systems.
- Database management basics and understanding the operation of IT systems.

This period laid the foundation for my later IT studies and professional development, and helped me navigate a wide range of technological solutions.

ESZTERHÁZY KÁROLY KATOLIKUS UNIVERSITY
Eger
2021

Higher Education Certificate

During my college studies, I gained in-depth knowledge of both the theoretical and practical aspects of programming. Throughout my education, I focused on the following areas:

- Advanced programming languages and technologies, such as Java, C++, Python, and scripting languages, applying them in complex projects.
- Database design and management (SQL, NoSQL), where I learned to build efficient data structures and optimized queries.
- Software design patterns and architectures, such as MVC and REST API design and implementation.
- Teamwork with agile methodologies (Scrum), where I worked in different roles, including design, development, and code quality assurance.
- Software testing and debugging techniques, which enabled me to develop robust and reliable systems.

One of my most notable university projects was developing a complex web application that provided real-time data analysis and visualization. Through such projects, I strengthened my problem-solving skills, as well as my ability to communicate and collaborate effectively within a team.
